Information concerning Java issue

JAVA 25 update procedure

Each browser is different and using the help menu for more information is recommended on clearing the cache. Restarting the browser clears the session cookies.

When attempting to connect to a Niagara station through a web browser using a Wb WebProfile, the web browser hangs when attempting to start the Java applet, as shown in the figure below.

Updated versions of wbapplet.jar, baja.jar, fox.jar and web.jar have been created that function properly with Java 1.7.0_25.

- Please make sure the security patches have been installed on the version of AX prior to the "Build" versions.
- Download and install wbapplet.jar for all 3.5 and 3.6 stations or web.jar for 3.7 stations. Update baja.jar and fox.jar for all stations.

Important: The sequence of installation is important. Security patch first, Web jars on necessary versions and Java Patches updates last.

The table below indicates of the version of EC-Net Ax that requires the following patches so to work properly.

EC-NetAx version	3.5.39	3.5.406	3.6.47	3.6.406	3.7.46	3.7.106
Java Patches installation	3.5.39/ wbapplets in lib folder	3.5.406/ wbapplets in lib folder	3.6.47/ wbapplets in lib folder	3.6.406/ wbapplets in lib folder	3.7.46/ web in modules folder	3.7.106/ web in modules folder
Web jar files	3.5.12011	n/a	3.6.12011	n/a	3.7.12011	n/a
Security jar files	3.5.0831	n/a	3.6.0831	n/a	3.7.0831	n/a
